PRAKASH OPTICALS

Company Profile

Prakash Optical was founded in 1978 and had its presence for more than 3 decades in the eyewear industry in India. We first started as a manufacturer then as a distributor of high grade optical products, specifically for ophthalmic applications. Thriving on technological enhancements in the eye care industry, we introduce ourselves as a quality oriented organization engaged in the manufacture and export of optical frames. We are India's largest manufacturer, exporter and importer of various brands.

Using the latest modern materials, manufacturing and marketing systems we bring our product direct from our factories to you. No Middlemen, no retail overhead, and practically no advertising budget, (we leave it to you, our satisfied customers to spread the word), we do not pay for or sell expensive, or even inexpensive, brand names, but only our own manufactured brands.

Our collection includes optical frames in Metal, Polyamide and Carbon material. The regular addition of new style and designs in sync with global fashion help us to carve a niche par excellence in the marketplace. We market our Optical Frames under the following brand name:

SALVADOR

SYNERGY

SPY

SIGNITY

Silgem

Sakshi

Sayam

Smoke

OUR STRENGTH

- ✚ State of the art factory spread over 5,000 square feet, equipped with latest and most sophisticated machinery.
- ✚ Located in one of the most prestigious industrial areas of South-West India.
- ✚ Our brands have a strong foothold in the Indian domestic market.
- ✚ Rich and latest collection.
- ✚ Wide market distribution channel.
- ✚ Quick order processing.
- ✚ Competitive pricing.

QUALITY

We at our organization maintain high quality standards throughout the production process. We encourage quality and innovation and that perhaps is the only reason for our tremendous success in the global market. We are known for providing high quality spectacles without compromising with material used and workmanship.

QUALITY ASSURANCE

Our Optical frames are made of 100% pure high quality material in accordance with exclusive Optical and mechanical requirements on eyewear products. Advance processing technology has been employed to ensure that the special features will incorporate during manufacturing. Parts and components of the frame has gone through the Quality Assurance Test on the 'pulling", "bending", "pressing" and abrasion to meet the international standards. The surface treatment is done by the luxury metallic plating. Such plating has passed the highest international quality testing such as "one time adhesion test", "two times adhesion test" and "32 hours CASS test".

Best quality material used which is strong and corrosion resistant. Material grade is same as being used in aerospace industry, nuclear power and chemical industry for years. Now, it has become one of the best materials of optical frame.

Our optical frames are allergy resistant; there will not be unfavorable response due to perspiration by the wearer. Special material gives rise to great comfort to wearing. Durability assures the resistance to deformation of the shape. The plating is always shiny and durable. Our optical frames are recognized as the advanced international product that is still rare in the market.
